Torrejón de Ardoz, Madrid

PROFESSIONAL SUMMARY

Computer Engineering student (UAH, 2024–2028) specializing in IT process optimization. Hands-on experience automating operational reporting, managing compliance documentation in bilingual (ES/EN) environments, and coordinating cross-functional teams under regulatory constraints. Actively developing expertise in Java, Python and SQL.

PROFESSIONAL EXPERIENCE

Security, Lifesaving & Risk Management Specialist

May 2023 – Present

Base Aérea de Torrejón & Humanitas Bilingual School

- **Cross-team documentation:** Produced structured technical reports consumed by local supervisors and international oversight bodies — written and delivered in professional English.
- **Preventive analysis:** Applied continuous risk-assessment methodologies, evaluating infrastructure parameters against compliance thresholds and escalating findings proactively before incidents occurred.

Swimming Instructor & Aquatic Activities Coordinator

Feb. 2025 – Present

Humanitas Bilingual School Torrejón

- **Performance tracking:** Improved student performance consistency ~25% by designing individualized training plans and tracking progress through structured session documentation aligned with institutional KPIs.
- **Safety compliance:** Ensured zero safety incidents across 200+ supervised sessions by enforcing compliance protocols and adapting procedures dynamically — applied risk-based decision-making under pressure.
- **Bilingual stakeholder communication:** Produced bilingual (ES/EN) progress reports and coordinated with academic management teams, building practical experience in cross-functional documentation for international environments.

FEATURED PROJECTS

Universidad de Alcalá – B.S. in Computer Engineering

- **Automated Reporting Pipeline (Python/SQL):** Designed a data extraction and report generation workflow querying relational databases, producing structured outputs consumable by non-technical stakeholders — directly analogous to cloud-based reporting configuration.
- **Role-Based Access Control System (SQL):** Implemented RBAC with user permission hierarchies and audit logging; mirrors enterprise identity governance patterns common in HCM cloud platforms such as Workday.

- **Process Synchronization & Workflow Automation (Bash/Linux):** Built concurrent resource management logic to eliminate race conditions — applied systems thinking to process reliability and operational continuity under load.

TECHNICAL COMPETENCIES

Languages & Tools: Python · Java · SQL · Bash · C/C++

Methodologies: Agile (Scrum fundamentals) · Technical Documentation & Reporting · Process Automation

Platforms: Workday (active self-study) · AI (Claude Code, Chat GPT, Gemini Antigravity) · Linux

Other: Driver's License: Category B (EU)

EDUCATION

B.S. Computer Engineering

2024 – Expected 2028

Universidad de Alcalá de Henares

High School Diploma – Science & Technology

2022 – 2024

Humanitas Bilingual School Torrejón

Specialized Pre-University Coursework – Astrophysics & Astrobiology

2018 – 2019

Cumlaude School

LANGUAGES

Spanish: Native speaker

English: Professional working proficiency (C1 in progress)
